

Voice control setup guide

English edition | SMAlux A60 RGBW Wi-Fi LED | 01CEL461

Connect your light to Google Home and Amazon Alexa

Product identification

Item: 01CEL461 | SMAlux A60 (A19) RGBW
E27 | 9 W | 800 lm
220-240 V AC | 50 Hz

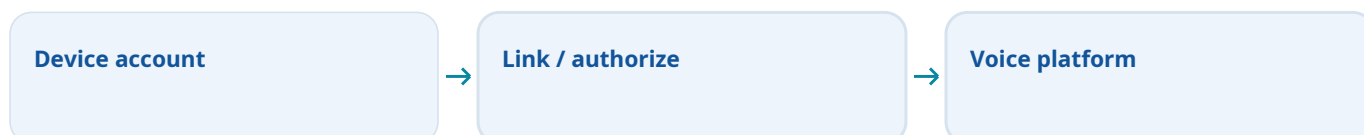

Before you begin

The bulb must already be added to the Smart Life / SMAlux device account used to manage it. Have your account country or region, login and password ready. The supplied guide names Smart Life for iOS and Android.

About this guide

This document explains linking an existing bulb account to a voice platform. It is based on the supplied product guide. The interface diagrams and menu names reflect an earlier app version; current screens and service availability may differ. Initial installation, Wi-Fi pairing and account creation are not covered.

Simplified account-linking diagram

Google Home: link your account

Use the device account that already contains your light.

- 1 Open Home control**
In the Google Home menu, choose Home control.
- 2 Add a service**
Tap the + button to add a device service.
- 3 Choose Smart Life**
Select Smart Life from the services list.
- 4 Link the device account**
Choose your country or region, enter the account and password used for the bulb, and tap Link Now.
- 5 Assign a room**
Assign the light to a room. Example: device name bedroom light, room Bedroom.
- 6 Check the device list**
Confirm the light appears in Home control.
- 7 Try voice control**
Say: OK Google, turn on bedroom light. You can also ask to turn it off or brighten it. Use your own device name.

Amazon Alexa: enable Smart Life

Find the skill and authorize access to your device account.

- 1 Open Skills**
Open the Alexa app and choose Skills in the Home menu.
- 2 Search for Smart Life**
Search for Smart Life and open the matching skill.
- 3 Enable the skill**
Tap Enable to start account linking.
- 4 Link and authorize**
Select your country or region. Enter the SMAlux / Smart Life device-account login and password. Tap Link Now, then Authorize.
- 5 Return to Alexa**
After successful linking, tap Done. If linking reports an error, close the window and sign in to the device account again.

About this guide

Use the credentials of the account containing your bulb. Do not enter your Alexa account password in the device-account login fields.

Amazon Alexa: discover your light

Complete device discovery and organize your devices.

6

Discover devices

Tap Discover Devices and wait while Alexa searches the linked account.

7

Check Smart Home

Find the light in the Alexa Smart Home device list.

8

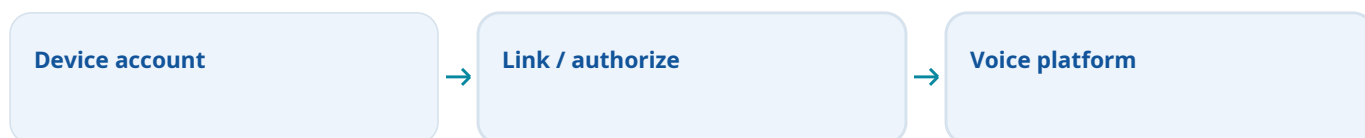

Create a group

Use Groups in Smart Home to create a group and organize your lights.

Setup checklist

Check that the correct device account is linked, the light is listed, and the desired room or group is assigned. Give the light a clear name. If menus differ, follow the current app prompts for linking a third-party service.
